SUMMARY

Final-year B.Tech CSE (AI & ML) student seeking an AI/ML Engineer role, with a working knowledge of machine learning, LLMs, and backend API development. Interested in applying and growing this experience on a team building real-world AI products.

EDUCATION

Vellore Institute of Technology Bhopal

Sep 2023 – Present

B.Tech, CSE (AI & ML) | CGPA: 8.68 / 10

TECHNICAL SKILLS

Languages: Python, C++

ML / DL: Regression, Classification, ANN, CNN, RNN, LSTM, Transformers, Fine-tuning LLMs

GenAI, LLM & Agentic AI Stack: LangChain, LangGraph, LangSmith, Agentic AI, RAG, Vector Databases, Prompt Engineering, LLM APIs (Groq / OpenAI / Gemini)

API Development: FastAPI, REST APIs, Pydantic, Uvicorn

Frameworks & Libraries: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV

EXPERIENCE

Research Intern — INCOIS, Hyderabad

May 2026 – Jun 2026

Ministry of Earth Sciences, Govt. of India

PROJECTS

Marine Macro-Litter Detection — EOS-06 OCM Imagery Python, Remote Sensing, OpenCV, AI

- Processed 13 spectral bands of OCEANSAT-3 data, computing 78 normalised difference indices (FDI, NDVI, PI) with adaptive DN-scale thresholding to detect marine plastic debris across coastal zones.
- Applied multi-date persistence mapping across 3+ satellite passes, suppressing ~40% atmospheric false positives; generated GeoTIFF and NetCDF outputs integrated with GIS tools for surveillance reporting.
- Produced 5+ georeferenced deliverables — diagnostic PNGs, composite maps, and GeoTIFF layers — enabling targeted debris collection with significantly reduced manual inspection overhead.

MediPredict AI — Live-Deployed Health Prediction Platform Python, XGBoost, FastAPI, SHAP, Streamlit

- Built and deployed an end-to-end ML health-risk prediction platform from scratch, covering the full lifecycle from Kaggle datasets to Streamlit Cloud deployment, using XGBoost with SHAP-based explainability and AUC-based evaluation.
- Engineered a FastAPI backend with Pydantic v2 models, dependency injection, BackgroundTasks, and CORS, exposing prediction and PDF-report-generation endpoints with auto-generated Swagger docs.
- Integrated a Groq-powered GenAI explanation endpoint (llama-3.1-8b-instant) to translate model predictions and SHAP outputs into plain-language health explanations for end users.

CERTIFICATIONS

- Applied Machine Learning in Python — [Coursera](#)
- Google Cloud Generative AI — [SmartInternz](#)
- Google IT Support Certificate — Google / Credly
